

Joe Gibbs Racing Oil

Yamaha 4-stroke Instructions

Below we will list the details on changing and installing your Joe Gibbs Racing oil. You must first run the BR oil to flush any remaining Yamalube out of the system. Please follow the instructions below closely.

- First with the original Yamalube oil and engine filter start the sled and let it get warmed up to temp. Once warmed up to temp drain the oil tank, crankcase, and change the oil filter.
- Once you have drained all the original Yamalube and installed a new oil filter you will need to run the BR oil for a total run time of 30-40 minutes. This is to flush any remaining Yamalube out of the oil system. You can usually do 10 minute run times from when the sled is cool to when the hot light will come on. Do this 3-4 times (for a total of 30-40 minutes).
- Now that you have run the BR oil for the appropriate time you will again drain the oil tank and crankcase of oil. You do not need to change the oil filter. You can then fill the oil tank with XP2 oil. When you have filled the oil tank be sure to run the sled until it is up to operating temp and then check the oil level again.
